Dear Hiring Manager,

I am applying for the position of “Korean speaking – C++ Developer” as advertised in <http://www.optiver.com/sydney/careersoptiver/job-opportunities> on September 15, 2013. I think this position fits my qualifications, experiences, and career interests.

I was involved in a number of C++ projects so far. To be precisely, the most proud of projects are 1) C++ software platform for Samsung smartphone (2004 ~ 2006) and 2) concurrent (multithreaded) programming bug detection tool (2009 ~ 2010). These projects were very complex in nature and designed in object-oriented manner, and required hard deadline and high safety, but I always finished them in time with high quality. At the moment, I am a senior software engineer at ResMed, developing medical software in C++.

In Sydney/Australia, I have worked for Open Kernel Labs (a.k.a General Dynamic Broadband) about 3 years from May 2010, where I have learned team work in Australia and communication skills together with agile style SDLC. In 2012, I worked with LG engineers (from Korea) to develop a prototype virtualised smartphone. In the project, I have taught them virtualisation skills, technically leaded them for the development, also made a good relationship with them as a bridge between OKL and LG.

I have a Ph. D. degree in CS from Korea University (one of the top-class universities in Korea), and learned many theoretical and pragmatcal aspects of computer programs. Given my education and experience, I am confident that I have the abilities to be an effective contributor. If you have any questions concerning my qualifications, please do not hesitate to contact me on 0425 358 491 or at [thejpark@gmail.com](mailto:thejpark@gmail.com). I can organise to be available for an interview at a time convenient to you. Though I do not have a prior experience in trading domain, I think I can catch up with it quickly.

Yours Sincerely,

Jung Gyu Park.
