SUMMARY

An experienced and capable software engineer with a demonstrated ability to produce high quality software solutions. Solid leadership and teamwork skill backed by strong technical ability obtained from academia and industry. Experienced software systems from operating system kernel up to mobile software platform. Proven ability to quickly learn new systems. Excellent analytical and problem solving skill. Strong written and verbal communication.

EMPLOYMENT HISTORY

Present ~ 2013.6, ResMed (Sydney/Australia)

Full-time Senior Software Engineer for medical devices

- Developed software system for sleep device in C++/python
- Patient information management in the cloud environment (client side)

2010.5 ~ 2013.3, General Dynamics Broadband (Open Kernel Labs, Sydney/Australia)

Full-time Senior Software Engineer. Open Kernel Labs was acquired by General Dynamics in August 2012, and is now General Dynamics Broadband

- Developed core functionality of the OS kernel on ARM processors (ARMv5-v7)
: also implemented user library (IPC, pthread, etc)
- Developed a virtualization platform (hypervisor) for Linux/Android/RTOS
: dual persona (personal/business domain) system with LG Android smartphones
: high-assurance framework for defense-grade security. Sponsored by US government
- Worked on many different SoC platform and implemented device drivers for cache, timer, serial, gpio, framebuffer, etc.
- Implemented client/server testing framework and build system using Python.
- Platform: LG Optimus 3D Max/L9 smartphone, Qualcomm, ARMv5-7, TI OMAP4

2002.9 ~ 2010.4, Samsung Electronics (Suwon/Korea)

Full-time Senior Software Engineer (2002 ~ 2008), Research Staff Member (2009 ~ 2010). All aspects of smartphone software development including software platform, framework/library, toolchain, and performance optimization.

2006 ~ 2010, Software optimization and toolchain for multicore systems (ARM SMP and IBM Cell chip). CPU/GPU multithread programming with C/C++/Linux

- Designed and implemented gcc-based parallelizing compiler (OpenMP) for IBM Cell processor (CPU + GPU) and ARM SMP. Automatic performance tuning.
- Carried out optimizations for multithreaded SW (i.e., H.264 codec)
- Developed verification tools for multithread or memory bugs (data race, deadlock, etc)
- Technical lead

2002 ~ 2006, Software platform (C++ and Java) and framework for mobile phones.
Java/C/C++ with Windows/VisualStudio/Cygwin. Object-oriented design.

- Implemented C++ library/framework
: threading, event, component model, utility, network (TCP/IP/HTTP), etc
: Tizen platform (<http://www.tizen.org>)
- Ported and optimized Java virtual machine and library (CLDC/MIDP) for mobile phone
: graphics algorithm, record database, network layer
: products for Sprint PCS USA

1995.3 ~ 2002.8, Korea University (Seoul/Korea)

Full-time Graduate Student. My research interest was how programming language can be used to solve the issues in the software engineering (i.e., optimization)

2000 ~ 2002: Ph. D Thesis

- A study on the specialization and optimization of computer programs in Java language

1997 ~ 2002: Part Time Lecturer

- Teaching first year courses in computer science

1999 ~ 2000: Disk Array Device Management Object Modeling Prototype

- Associate researcher at University of Idaho
- Sponsored by Hewlett Packard
- Implemented a prototype software system for managing HP RAID

1998: Software Reuse using Open Implementation and Aspect Orient Programming

- Carried out a research on the theory of software reuse by Open Implementation Analysis and Design and Aspect Oriented Programming

1996 ~ 1998: WEB based 3D Modeling and Rendering system

- Sponsored by Ministry of Information and Communication, Republic of Korea
- Implemented a geometric 3D modeling and rendering system which runs on a web browser

EDUCATION

2002, Ph. D. in Computer Science, Korea University, Seoul, Korea

1997, M.S. in Computer Science, Korea University, Seoul, Korea

1995, B.S. in Computer Science, Korea University, Seoul, Korea

TECHNICAL SKILLS

- Large, Complex, Multithread/Multicore Software Design and Optimization
 - Low level OS kernel development: Linux, OKL4, Virtualization
 - Software platform development: C++ Mobile Software Platform, Java Virtual Machine
 - Compiler design, porting, and optimization (gcc, OpenMP, Java)
- Strong C/C++/STL, Python, Java (Ph. D thesis), Design Patterns, Object Oriented Design
- Agile Development, Scrum, Test Driven Development
