Dear Hiring Manager

I am applying for the position of “Software Engineer - Embedded C++/OO” as advertised in www.seek.com.au on May 7, 2013. I think this position fits my qualifications, experiences, and career interests.

I worked for Samsung and General Dynamics Broadband (also known as Open Kernel Labs) over 11 years as a software engineer for embedded systems. I am strong at C/C++/STL, and was involved in a number of commercial C++ projects including, but not limited to, C++ software platform for Samsung smartphone. In the project, I implemented C++ libraries including TCP/IP/UDP, and used UML for design review. The projects in Samsung (mostly for mobile phones) required high quality through strong review and QA, which allowed me to have skills for reviewing, testing, and writing good code. Development environment was either Windows (cygwin or visual studio) or Linux.

In General Dynamics Broadband, I worked on low level real-time operating systems kernel and virtualisation of mobile devices. In 2012, I implemented a proof of concept design of defense-grade secure smartphone sponsored by US government (the design was given by a US department). The software development in General Dynamics Broadband was agile style – each development task was managed by Jira and aligned with sprint, and source code review was done using Review Board (web based review tool).

I have experienced almost all aspects of software development from the low level of operating system kernel, software platform and application framework (libraries), toolchains, and QA software. I have a Ph. D. degree in CS from Korea University (one of the top-class universities in Korea), and keen to learn new technology. Given my education and experience, I am confident that I have the abilities to be an effective contributor for your client. If you have any questions concerning my qualifications, please do not hesitate to contact me on 0425 358 491 or at thejpark@gmail.com. I can organise to be available for an interview at a time convenient to you.

Yours Sincerely,

Jung Gyu Park.
