Dear Hiring Manager,

I am applying for the position of "Software Application Engineer" as advertised in www.linkedin.com on May 2, 2013. I think this position fits my qualifications, experiences, and career interests.

I have a Ph. D. degree in CS from Korea University (one of the top-class universities in Korea), and worked for top IT companies in Korea (Samsung) and Australia (General Dynamics Broadband). While in Samsung, I was involved in C++ mobile software platform (www.bada.com) and Java VM for mobile devices. While in General Dynamics, I was involved in virtualisation of Android smartphones (from LG). These experiences on different mobile platforms allowed me to have deep understanding of mobile platform as well as mobile application development.

I have some media codec application experiences as well. While in Samsung, I was involved in re-implementing H.264 codec (ffmpeg) in multithreaded manner to cope with multicore architecture (ARM, IBM Cell BE). Though I am not an expert on codec, I have gained basic understanding of codec from this project.

I have a work experience similar to support engineer in General Dynamic Broadband. For the virtualisation of Android LG smartphone, I have taught LG engineers (visit LG Korea) our virtualisation skills, leaded them technically, and helped them fix problems. I also made a good relationship with them.

 Given my education and experience, I am confident that I have the abilities to be an effective contributor for your client. If you have any questions concerning my qualifications, please do not hesitate to contact me on 0425 358 491 or at thejpark@gmail.com. I can organise to be available for an interview at a time convenient to you.

Yours Sincerely,

Jung Gyu Park.
