Dear Matthew

I am applying for the position of "Senior C++ Programmer (Windows) with Java" as advertised in seek.com.au at 21/May/2013. I think this position fits my qualifications, experiences, and career interests.

I worked for Samsung and General Dynamics Broadband (also known as Open Kernel Labs) more than 10 years as a software engineer. I am strong at C/C++/STL, and was involved in a number of commercial C++ projects including, but not limited to, C++ software platform for Samsung smartphone. In the project, I implemented C++ libraries including thread/event/network API, and used UML for design review. The projects in Samsung (mostly for mobile phones) required high quality through strong review and QA, which allowed me to have skills for reviewing, testing, and writing good code. The project was performed on Windows system (Visual Studio and Cygwin).

I experienced Java project as well. My Ph. D thesis was on the optimisation of Java program. In Samsung, I ported and optimised Java virtual machine on mobile phones (all shipped to US market). I am still using Java as a hobby, and keeping up with latest updates.

I have experienced almost all aspects of software development from the low level of operating system kernel, software platform and application framework (libraries), toolchains, and QA software. I have a Ph. D. degree in CS from Korea University (one of the top-class universities in Korea), and keen to learn new technology (i.e,. Web services). Given my education and experience, I am confident that I have the abilities to be an effective contributor for your client. If you have any questions concerning my qualifications, please do not hesitate to contact me on 0425 358 491 or at thejpark@gmail.com. I can organise to be available for an interview at a time convenient to you.

Yours Sincerely,

Jung Gyu Park.
